

THE RISE OF CIGARS AND CIGAR-SMOKING HARMS

Despite increases in cigar smoking, especially among youth, cigars are often overlooked by legislators and other policymakers who mistakenly believe that cigars are “not that harmful” compared to cigarettes and deserve special treatment. But cigars are addictive and deadly – causing lung cancer, other cancers, heart attacks and more – and they are often marketed in a wide variety of kid-friendly flavors.

Although cigarette smoking has been slowly declining in the United States, since 1993 cigar consumption has been increasing dramatically.¹ Between 2000 and 2006, for example, cigarette consumption declined by 13 percent but cigar consumption increased by more than 37 percent.² In recent years, the number of kids who try smoking cigars has been close to or greater than those who try cigarettes – and more and more of those cigar initiates are females and youth.³ As one cigar retailer puts it, “The little stogies appeal to young adults and women who see them as less harmful and more stylish than cigarettes.”⁴

- After smoking, cigar smoking is the second most common form of tobacco use among youth. The most recent data available show that in 2005, 14 percent of high school students reported current use of cigars (19.2 percent among boys; 8.7 percent among girls).⁵
- In some states, cigar smoking among some youth groups is even more frequent than cigarette smoking. In New Hampshire, for example, 19 percent of high school boys currently smoke cigarettes but 25.6 percent smoke cigars.⁶

Health Harms from Cigar Use. Like cigarettes, cigars are smoked and contain the same toxic and carcinogenic compounds.⁷ Accordingly, cigar smoking causes the same kinds of serious health consequences as cigarette smoking, such as cancer of the lung, oral cavity, larynx, and esophagus.⁸ More specifically:

- Cigar smokers experience higher rates of lung cancer, heart disease, and chronic obstructive pulmonary disease (COPD) than non-smokers.
- Cigar smokers can spend up to an hour smoking a single cigar that can contain as much tobacco as a pack of cigarettes.
- Oral and esophageal cancer risks are similar among cigar smokers and cigarette smokers.
- Male smokers are up to eight times more likely to die from oral cancer and ten times more likely to die from laryngeal cancers than nonsmokers.
- Cigar smoke is toxic and harms innocent non-users through secondhand smoke exposure.
- In the past, most cigar smokers did not inhale, so their risk for lung cancer from cigar smoking has been somewhat lower than cigarette smokers. But risk of lung cancer and other smoking-caused disease increases with more frequent cigar smoking and deeper inhalation; and increasing numbers of new cigar smokers are choosing small cigars that are smoked like cigarettes.⁹

The Rapid Rise of Small Cigars. Since 1998, small cigars have been the fastest growing segment of the expanding cigar market. Between 1998 and 2006, consumption of large cigars increased by 45 percent, but small cigar consumption increased by 154 percent.¹⁰ This surge is especially dangerous because small cigars are more likely to be inhaled and smoked like cigarettes, making their use even more harmful and deadly. In fact, many “little cigars” (such as Swisher Sweets “Small Cigars”) have the same size and shape as cigarettes, and, like cigarettes, are sold in packs of twenty, often with filter tips. But these “little cigar” cigarettes exploit loopholes in existing legal definitions of cigarettes to escape being regulated or taxed as cigarettes, making them much more available and affordable, especially to youth.

- The much lower federal and state tax rates on small cigars compared to cigarettes encourage smokers to switch to virtually identical small cigars, rather than quit or cutback, when faced with high cigarette prices or a new cigarette tax increase. Market research has found that “a pack of 20 cigarillos can generally be found for a much lower price than even economy cigarettes,” which encourages product

switching.¹¹ As an industry analyst has observed, “People are using them as a cheaper alternative to cigarettes.”¹²

- Internal industry documents show that this strategy to take advantage of tax disparities has been well-appreciated by the tobacco companies for years. Noting the “considerably lower taxation for cigars/cigarillos than for manufactured cigarettes,” one Philip Morris document stated that a cigarillo-type product should be developed that is “acceptable taste-wise for usual cigarette smokers.”¹³
- Cigar companies are also capitalizing on the similarities between little cigars and cigarettes by packaging and marketing little cigars in ways that mimic those of cigarettes. A 2007 advertisement for 20-packs of Winchester little cigars reads, “Always Smooth. Always satisfying. And always a fair price,” enticing people to smoke little cigars instead of cigarettes. Surveys suggest that this marketing strategy is working – when smokers were asked what type of *cigarette* brand they usually smoke, some participants actually named *small cigar* brands like Phillies, Swisher Sweets, and Captain Black.¹⁴

Flavored Cigars and Kids. Much of the growing popularity of small cigars and cigarette-like “little cigars” comes from the explosive growth in flavorings, such as candy, fruit, chocolate and various other kid-attracting tastes. While data on the impact of flavored cigars on youth initiation still needs to be collected and analyzed, completed research on flavored cigarettes shows that they are being tried and used primarily by the young.¹⁵ As a cigar retailer commented, “The flavors attract customers.”¹⁶

Thanks to legal actions against the cigarette companies based on the state tobacco lawsuit settlement agreements, the amount of flavored cigarettes on the market has been reduced significantly. But cigars are exempt from the tobacco settlement restrictions, and state governments (except for Maine) have not yet taken effective measures to stop the marketing of cigars with egregious kid-friendly flavors. It is likely that the small and flavored cigar problem will get even worse, since Philip Morris and R.J. Reynolds, which already have a long history of marketing to kids, have recently acquired cigar companies.¹⁷ Altria/Philip Morris has purchased John Middleton, Inc. (maker of the popular and cheap Black and Mild flavored cigars) and it is highly likely that R.J. Reynolds will acquire Swisher International cigar company (whose cigars include grape-flavored “blunts” and strawberry cigarillos).¹⁸
